

# Impaired Driving

## Impaired Driving from Alcohol is Responsible for More Than Half of the Traffic Deaths in Hawaii County

- More than half of the Hawaii County traffic deaths (58%) were alcohol-related, between 2002 and 2008. This proportion is higher than the other counties and 12% higher than the State average for the same time. In 2006, the national average was 40% and Hawaii was the State with the highest proportion of alcohol-related traffic deaths (National Highway Traffic Safety Association, 2006).
- **ALCOHOL-RELATED FATALITY** – is a death that occurs in crash involving at least one driver, pedestrian, or pedalcyclist with a BAC of 0.01 or above (National Highway Traffic Safety Association, Traffic Safety Facts, August 2007).
- **DUI-RELATED FATALITY** – is a death that occurs in a crash involving at least one driver or motorcycle operator who was legally intoxicated (BAC=0.08+ (National Highway Traffic Safety Association, Traffic Safety Facts, August 2007)).
- **ALCOHOL-RELATED TRAFFIC CRASHES** are defined by the U.S. National Highway Traffic Safety Administration to include any and all vehicular (including bicycle and motorcycle) accidents in which any alcohol has been consumed, or believed to have been consumed, by the driver, a passenger or a pedestrian associated with the accident (Alcohol-related traffic crashes in the United States (September 24, 2007)).
